I would like to register for a free academic version of

EMPIRE™18 **ParaSurf™12**

Computer, where I want to run the software (License server information)²

System/Executable **Linux** **Windows**

MAC ID [] : [] : [] : [] : [] : [] : []

Host name _____

or IP address [] . [] . [] . []

Please, email this form to info@ceposinsilico.com

¹ An email address from a *bona fide* academic institution is required.

² We need to know the MAC ID (Media Access Control, Ethernet-ID) and the host-name or the IP address of the computer where you want to run Empire™ or ParaSurf™ (or more precisely, where you want to run the CeposLM license server). You can obtain the MAC address on Linux using the "ifconfig" command when logged in as root. The MAC address is the 12-digit hexadecimal number separated by colons also called hardware address: HWaddr (e.g. 00:80:41:AE:FD:7E) in the eth0 intercept. The IP address is marked as inet addr (e.g. 192.0.2.42). On Microsoft Windows, enter the command "ipconfig /all" in a Command Prompt window.
